About SPU

Sankalchand Patel University's history can be traced back to 1952 when Nootan Sarva Vidyalaya Kelavani Mandal (NSVKM) was established by Shri. Sankalchand Patel, a freedom fighter and a social entrepreneur. The objective was to fulfill educational and socio-cultural needs of the people in North Gujarat. It was the collective vision of Shri. Sankalchand Patel and the Trust which helped Nootan Sarva Vidyalaya Kelavani Mandal (NSVKM) achieve the status of Sankalchand Patel University (SPU). At the university, value based diversified education was given prominence and delivered to the students in North Gujarat. Since 2014, under the dynamic leadership of Hon'ble Chairman, Shri. Prakash Patel, the trust has effectively achieved its goal to fulfill educational needs in the area through the Nootan Education cluster of 2 schools and 14 colleges on two separate campuses. The Trust commenced its first educational activity with the setting-up of the Nootan High School in Visnagar in the year 1942. Today, the trust successfully administers educational institutions right from primary schools to graduate and post graduate colleges and other professional courses including Ph.D. programs. The trust's unwavering efforts towards the growth of education have earned its institutes many merits and a resilient name in the educational campaign of India.

About the Conference

The International Conference on Smart Technologies for Medical and Health Sciences is a global platform dedicated to exploring how advanced technologies are transforming the landscape of modern healthcare. As the world moves toward data-driven, digitally integrated systems, this conference highlights innovations such as the Internet of Medical Things (IoMT), telemedicine, virtual care, and healthcare robotics. It delves into how smart hospitals are being designed with intelligent infrastructure and interconnected systems to deliver safer, more efficient, and patient-centered care. Participants will gain insights into how wearable technologies, biosensors, and continuous monitoring tools are enabling real-time health management and proactive interventions, marking a shift from reactive to preventive healthcare models.

At the heart of the conference lies the exploration of artificial intelligence (AI) and machine learning (ML) as engines of predictive and personalized medicine. Sessions will focus on how deep learning, big data analytics, and intelligent decision support systems are empowering clinicians to make informed, timely decisions that enhance both clinical outcomes and operational efficiency. Beyond the technology, the conference also emphasizes the human dimension how innovation in digital health can be guided by ethics, empathy, and equity. By bringing together researchers, healthcare professionals, engineers, and policymakers, the event aims to foster collaborations that bridge the gap between innovation and implementation, paving the way toward a smarter, more connected, and sustainable healthcare future.
